

(A) Petersen graph $K(5, 2)$
 vertex = 2-subset $\{a, b\} \subset \{0, \dots, 4\}$; edge $\iff$ disjoint

(B) Squared-Gram $Q_{ij} = (v_i \cdot v_j)^2$
 5/9 on Petersen edges, 1/9 on complement

(C) $K = \frac{3}{2}(Q - J/3) = 2E_1$
 $\text{spec}(K) = \{2^{(5)}, 0^{(5)}\}$ (Theorem 1)
